

Journal Expansion Will Include Articles on Cybertherapy and Rehabilitation

Dear Readers:

I have some exciting news to share with you. Beginning with this issue, we have merged the **Journal of CyberTherapy & Rehabilitation** into this journal, *Cyberpsychology, Behavior, and Social Networking*. Although JCR was indexed in PsycINFO and other important databases, and has maintained a high level of quality and interest, we feel this merger will provide a higher-profile home for the cybertherapy and rehabilitation community and offers its authors many additional benefits. *Cyberpsychology, Behavior, and Social Networking* is indexed in Medline and all key indexing services worldwide, and has an impressive impact factor. The journal is widely accessible in key libraries and institutions in 35 countries around the world, and is provided free online to 106 developing nations. The journal enjoys significant attention from the international media—articles from the journal have been covered in the *New York Times*, *The Wall Street Journal*, CNN, Forbes Magazine, ABC news, and other prestigious media outlets.

I hope you will share my enthusiasm for this plan and I look forward to expanding our excellent journal coverage to carefully selected articles on therapy, training, and rehabilitation in future issues of *Cyberpsychology, Behavior, and Social Networking*.

Brenda K. Wiederhold, PhD, MBA, BCIA
Editor-in-Chief
Cyberpsychology, Behavior, and Social Networking Journal
